

Get an input number from the user and check whether it is a positive or negative number.

**Input :**

-10

**Output :**

Negative number

**Input :**

0

**Output :**

Neither positive nor negative

**Input :**

15

**Output :**

Positive number

```
import java.util.Scanner;
```

```
public class Program {
```

```
    public static void main(String[] args) {
        Scanner sc=new Scanner(System.in);
        int num=sc.nextInt();
        if(num>0) {
            System.out.println("Positive number");
        }
        else if(num<0){
            System.out.println("Negative number");
        }
        else {
            System.out.println("Neither positive nor negative");
        }
    }
}
```
